

TECHNICAL DATA SHEET

Pumping station NEBBIASECCA® Booster VAR

MAIN APPLICATIONS:

- Textile Industry.
- Graphics and Printing.
- Woodworking.
- Automotive.
- Electronics Industry.

ADVANTAGES:

- Automatic pressure regulation thanks to the inverter.
- Reduction of energy consumption.
- Low maintenance.
- Compact and resistant structure.
- Suitable for continuous operation.

ACCESSORIES INCLUDED:

- Glycerine pressure gauge.
- Adjustable pressure switch.
- Calibrated safety valve.
- Electrical panel with controls and protections.
- Integrated inverter system for automatic pressure management.
- Protection pressure switch in case of lack of water

OPTIONALS:

- Bactericidal UV lamp.
- Remote control.

Technical Features

Parameter	Technical specification
Pump type	With ceramic pistons
Flow rate	From 2 to 14 liters/min
Operating pressure	70 bar
Materials	Brass pump head
Motor	Three-phase 400V – 50Hz
Inverter	3HP/5HP – 2.2KW/3KW
Assembly	Compact stainless steel structure with anti-vibration supports
Encumbrance	mm. 1340x1000x550
Dry weight	130 Kg
Filtration unit	10" composed of two cartridges (10 and 5 microns)

The **BOOSTER VAR** group is the ideal solution for all industrial applications that require high pressure water in a continuous, efficient and controlled way. Designed to guarantee high performance and reliability, it integrates a ceramic piston pump with an intelligent inverter, which allows to automatically adjust the pressure based on the real demand of the system, optimizing consumption and performance.

Thanks to its compact stainless steel structure, the **BOOSTER VAR** is suitable even for the most demanding environments such as those in the textile, graphics, woodworking, winemaking, electronics and many other sectors.

The **BOOSTER VAR** is the perfect choice for those looking for high performance, long-term reliability and maximum process control.
